

REMARKS/ARGUMENTS

Claim 8 has been canceled and replaced by new independent Claim 15. Claim 15 clarifies the process of the present invention wherein the data-requesting device actively requests data from the data preparing device and also actively transmits to the data-preparing device a list of useable display formats. These two active method steps clarify that the data requesting device not only initiates a specific request but also transmits information data about the capabilities of the data-requesting device to the data-preparing device.

These steps are totally absent from Grigor et al which is simply a computer having a plurality of displays 24-30. Although the displays have various display modes, the displays do not initiate an active step of transmitting a data request over a network nor an active step of transmitting over the network data about the capabilities of the displays. The displays do not request data they are simply supplied data under the control of the microprocessor which knows the capabilities of the displays.

Although it is believed that Claim 15 clearly distinguishes over Grigor et al combined with Thomas, if the Examiner believes that further revision of the claims would be of
